1 Scaling Agile

1.1 Scaling Frameworks

1.1.a SAFe (Scaled Agile Framework)

- Comprehensive framework for enterprise-scale agility
- Multiple layers: Team, Program, Large Solution, Portfolio
- Best for large organizations (100+ team members)

1.1.b LeSS (Large Scale Scrum)

- Maintains Scrum principles at scale
- Two variations: Basic LeSS (2-8 teams) and LeSS Huge (8+ teams)
- Focuses on single Product Owner concept

1.1.c Nexus

- Lightweight framework by Scrum.org
- Designed for 3-9 Scrum teams
- Introduces Nexus Integration Team

1.1.d Scrum@Scale

- Modular approach to scaling
- Emphasizes organizational transformation
- Suitable for various organization sizes

1.2 Implementation Strategies

1.2.a Team of Teams Structure

- Cross-functional teams
- Clear interfaces between teams
- Shared objectives and metrics

1.2.b Communities of Practice

- Knowledge sharing groups
- Best practice development
- Technical excellence focus

1.2.c Shared Services Model

- Specialized support teams
- Common infrastructure management
- Centralized expertise

1.2.d Cross-team Coordination

- Scrum of Scrums meetings
- Integration planning
- Dependency mapping

1.3 Common Challenges and Solutions

1.3.a Communication Overhead

- Use scaled daily standups
- Implement information radiators
- Establish clear communication channels

1.3.b Dependencies Management

- Create dependency matrices
- Schedule alignment meetings
- Use visual management tools

1.3.c Consistency in Practices

- Define shared guidelines
- Regular alignment workshops
- Measure adherence to standards

1.3.d Tool Integration

- Select compatible tool stack
- Automate where possible
- Regular tool effectiveness reviews

1.4 Practical Tips

- Start small and scale gradually
- Focus on value delivery
- Monitor and adjust regularly
- Invest in training and coaching
- Maintain agile principles
